CONTINUATION OF FINAL REPORT OF POSTMORTEM EXAMINATION

VIII. OPINION: Based on the above information, the cause of death is

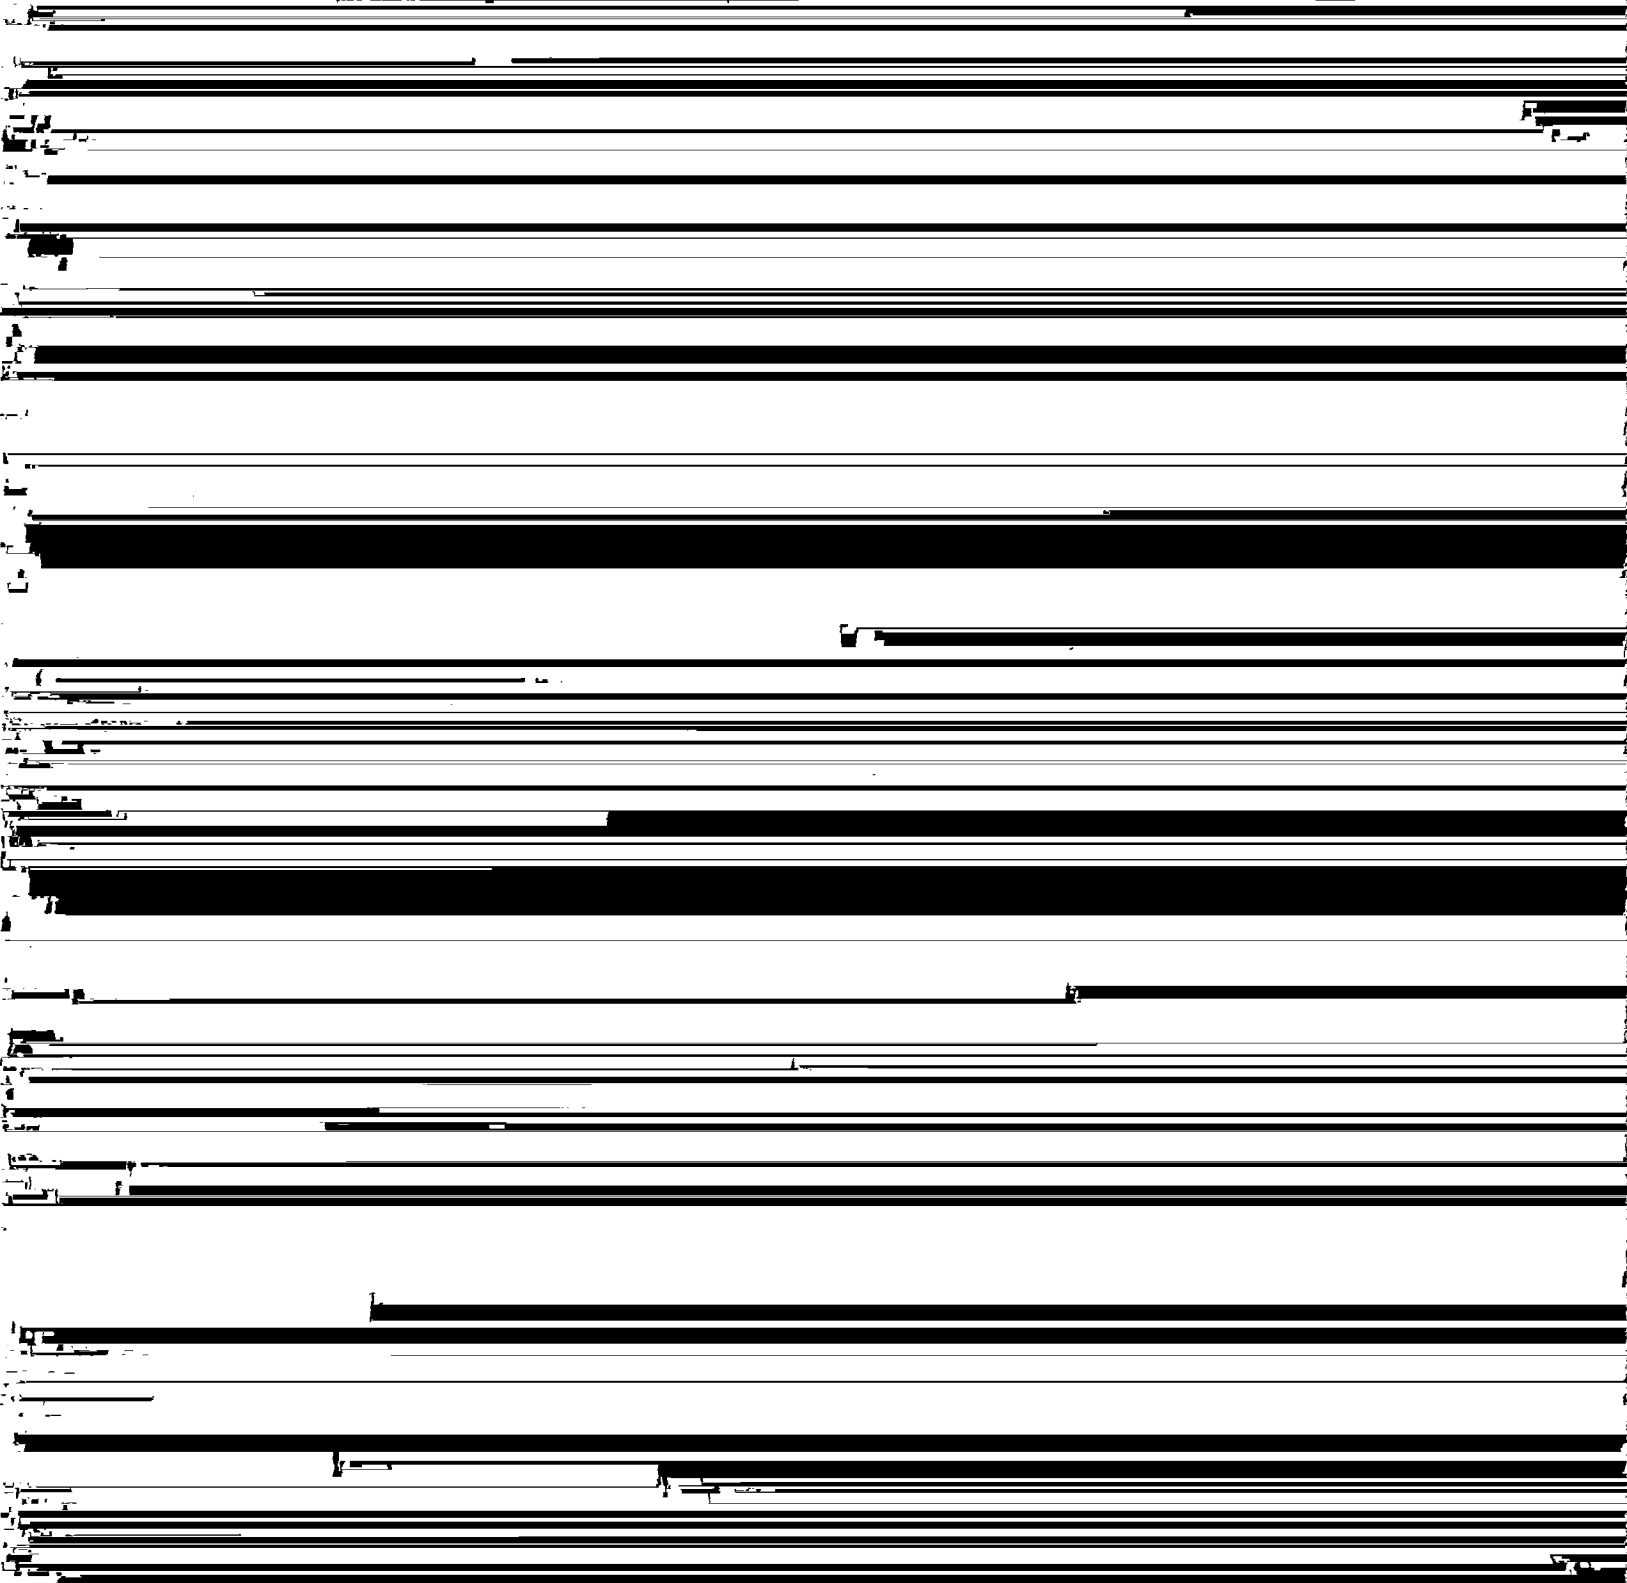

[REDACTED]

A02-93

(b)(6)-4

I. POSTMORTEM EXAMINATION:

A. GENERAL: The postmortem examination is performed in the mortuary affairs tent in Bagram Airfield, Afganistan on 6-8 December 2002. Photographs are obtained on 6 December 2002.

A02-93

(b)(7)-4

II. GROSS AUTOPSY FINDINGS:

A. CLOTHING AND PERSONAL EFFECTS: The remains are presented for autopsy clothed in a disposable diaper. No additional clothing or personal effects accompany the body.

B. EXTERNAL EXAMINATION:

A02-93

NOSE: Injuries are described below in the Evidence of Injury Section. No non-

traumatic abnormalities are identified.

MOUTH/LIPS: Unremarkable except for postmortem drying artifact.

TEETH: Dentition is in good repair.

NECK/CHEST/ABDOMEN/BACK/ANUS: Unremarkable except for injuries that are described below in the Evidence of Injury Section. The abdomen is flat.

EXTERNAL GENITALIA: Normal adult circumcised male with bilateral

ARMS/HANDS/FINGERNAILS: Unremarkable except for injuries described below

A02-93

(b)(6)-4

NECK: Examination of the soft tissues of the neck by _____

A02-93

67094

INTERNAL GENITALIA: The prostate is palpably unremarkable. On cut sections, the testes show no abnormal masses or evidence of injury.

ENDOCRINE SYSTEM: The pituitary, thyroid, adrenals, and pancreas show the usual anatomic features without evidence of natural disease or injury.

MUSCULOSKELETAL SYSTEM: No fractures are identified and the skeletal muscle demonstrates the normal appearance. The bone marrow, where visualized, is unremarkable.

APPENDAGES: Consists of EKG leads adherent to

A02-93

(b)(6)-4

left flank and mid left back. The extended portion measures 10 1/2 x 1/4 inches. On the left mid back is a 1/2 inch greatest dimension red contusion. Multiple vertical parallel linear [redacted] "brush burn" type pattern covering an area of 7 x

There is no evidence of underlying injury on internal examination.

(3) **EXTREMITY INJURIES:** Multiple ovoid dark purple contusions, the largest averaging 1/2 in greatest dimension cover an area of 2 1/2 x 1/4 on the anterior right upper arm. On the right inner arm are multiple irregular partially ovoid red-purple contusions,

A02-93

HEART: Sections of the myocardium reveal intact striated muscle fibers. There is no evidence of atrophy, hypertrophy, and recent or old myocardial infarction.

LUNGS: The alveolar spaces and small air passages are expanded and contain no significant inflammatory component. There is focal mild edema fluid. The alveolar walls are thin and mildly congested. The arterial and venous walls are normal.

A02-93

(b)(6)

IV. TOXICOLOGY: Samples of vitreous fluid, bile, and tissue samples of liver, heart,

Examiner's Forensic Toxicology Laboratory, Armed Forces Institute of Pathology
